

2026 Outlook Correction

In printed copies of RFA's 2026 Ethanol Industry Outlook, we offer the following corrections. The online version [available at RFA's website](#) has been updated accordingly.

On Page 4, in the upper right column, the number cited for potential new corn demand should with E15 be *2.4 billion bushels*, and the sentence should read: "Indeed, a recent study by RFA and the National Corn Growers Association found nationwide adoption of E15 would create new demand for 2.4 billion bushels of corn, adding \$4 billion in farm income and supporting 64,000 jobs across the economy."

On Page 21, in the chart in the middle (U.S. Crude Oil Trade), the words in the legend are transposed and should read, from left to right: *Net Imports*, *Exports*, and *Imports*, as shown below.
