RFA DUST HAZARD ANALYSIS WEBINAR

What you need to know and do, as it pertains to fuel ethanol production from grain.

In the webinar we will explore hazard identification; specifically, who should complete a DHA and why the DHA should be completed. We will explore the goals of an effective DHA and the qualifications of an effective DHA leader. The webinar will discuss the seven steps to completing an effective DHA including the necessary data and team qualifications. We will discuss some of the standard dust test methods, what data is produced and what the data means in relation to dust hazards and controls.
